Ali Elyasi

Product Manager

Tehran, Iran | s.alielyasi@gmail.com | +98 937 872 8706 | linkedin.com/in/seyedalielyasi

Professional Summary

Product Manager with 5+ years building consumer mapping and geospatial products for a large national user base. Led an AI-powered support automation platform that cut daily tickets 96%, a UX redesign that reduced ticket volume 30%, and 7+ API launches that grew feature adoption 35% — turning user feedback into measurable retention gains.

Experience

Product Manager — Shecan.ir (Part-time) *Mar 2026 – Present (6 mos)*

- Cut daily unresolved support tickets 96% (8,000→300) by architecting and shipping an end-to-end AI-powered support automation platform that auto-classified, auto-resolved via a knowledge-base-grounded response bot, and escalated complex cases to human agents — while optimizing LLM token cost.
- Led a statistical, large-scale customer research program that revealed paying customers were significantly less satisfied than users of competing services, repositioning customer retention as the company's top strategic priority for leadership.
- Designed a Real User Monitoring architecture that turned the production Android app fleet into a distributed network-health sensor, detecting regional DNS/Proxy outages and ISP-level blocking from real user vantage points.
- Engineered a zero-touch, multi-plan resolution flow for a new CLI product that automatically connects users to their highest-priority active subscription, eliminating manual plan selection for multi-plan customers.
- Built a rule-engine-driven in-app messaging platform (dialogs & banners) that let marketing launch segment-targeted campaigns by plan, subscription status, and user list — with zero app-release dependency.

Product Manager — Map.ir (Full-time) *Feb 2023 – Present (3 yr 6 mos)*

- Owned the product roadmap for a consumer geospatial app used by 4,000 weekly active users, prioritizing features from usage analytics and direct customer feedback and closing the loop from insight to shipped feature.
- Led discovery and drove the end-to-end redesign of the Map.ir web app and admin panel — from user research and problem framing through design and launch — lifting usability scores and cutting support-ticket volume by ~30%.
- Directed the design, prioritization, and launch of 7+ geospatial APIs for Map.ir's web service package; based on adoption metrics reported by client businesses, feature adoption grew by ~35%.
- Defined and tracked product/operational KPIs (CSAT, ticket volume, invoice-processing time, service uptime) to guide roadmap decisions and prove impact to stakeholders.
- Automated billing and invoicing with full integration into the national tax system, cutting invoice-processing time by ~60% and compliance errors by ~90% — reducing operational risk for the business.
- Established a hardware-to-service monitoring stack, reducing service downtime and improving mean time to resolution by ~40%.
- Raised CSAT year-over-year by systematizing proactive support and feeding customer signals directly into the product roadmap.
- Mentored a cross-functional support and QA team, building a user-centric, accountability-driven culture.

Associate Product Manager — Map.ir (Full-time) *Aug 2021 – Feb 2023 (1 yr 6 mos)*

- Prioritized the consumer app backlog using usage analytics, driving continuous improvements in engagement metrics.
- Directed QA/test team and rolled out test automation, cutting release regression time by roughly 30%.
- Analyzed user behavior data to identify friction points, feeding a continuous UX-improvement cycle.
- Produced product, support, and training documentation that shortened new-user and new-agent onboarding time.

Software Test Engineer — Map.ir (Full-time) *Mar 2020 – Mar 2021 (1 yr)*

- Executed UI- and API-layer test coverage against PRD and UX specs, cutting post-release defect escapes by ~35% while expanding edge-case coverage through structured test cases and scenarios.
- Tracked defects through the full lifecycle, improving fix-verification turnaround.

Test Automation Engineer — Sheypoor.com (Full-time) *Mar 2021 – Aug 2021 (6 mos)*

- Built and maintained an automated test suite across web, mobile, and API layers, cutting manual regression testing time by roughly 50% and Refactored test suites for cross-platform reliability, reducing flaky-test rate significantly.

Skills

Product: Consumer Product Strategy, Roadmap, Discovery, Prioritization, PRD, Feature Adoption, Agile (Scrum, Kanban)
Customer & Data: User Research, CSAT/Retention Analysis, SQL, Wireframing, User Story Mapping
Leadership: Cross-functional Team Management, Coaching, Training
Tools: Codex, n8n, Postman, Jira, Figma, Python, Selenium, Robot Framework, Docker, PostgreSQL, Kibana

Education

B.E. in Computer Software Engineering
Islamic Azad University, North Tehran Branch (2018 – 2022)

Courses

- Product Management Foundations, Reforge (2026)
- Certified Tester Foundation Level, SEMATEC (2021)
